PROFILE

Data Science student at Binus University with hands-on experience in data analysis, machine learning, cloud deployment, and database systems. Experienced in developing end-to-end technical projects using Python, SQL, TensorFlow, scikit-learn, and AWS. Strong foundation in problem solving, algorithms, object-oriented programming, and data-driven development.

WORK EXPERIENCE

Associate Member - Data Analyst

March 2026 - Present

- Write SQL queries to fulfill user data requests and deliver accurate, usable datasets for operational needs.
- Evaluate dashboard data pipelines, identify inconsistencies, and correct query or transformation logic to improve reliability.
- Create user guidebooks that explain dashboard features, metric interpretation, and recommended usage workflows.
- Support users in analyzing dashboard insights and resolving dashboard- and query-related issues.

PROJECTS

Credit Score Prediction and Model Deployment

2026

Developer | Python, scikit-learn, MLflow, FastAPI, Streamlit, AWS SageMaker

- Developed an end-to-end multiclass machine learning pipeline using approximately 25,000 customer records.
- Performed missing-value imputation, anomaly and outlier handling, categorical encoding, and feature engineering.
- Tuned a Random Forest classifier to achieve a 0.74 weighted F1-score and built modular training and inference components.
- Integrated MLflow for experiment tracking and prepared FastAPI, Streamlit, and AWS SageMaker deployment workflows.

B – Full Online Ordering Apps for Binus Canteen

2026

Developer | JavaScript, HTML, Tailwind CSS, Vite

- Developed a responsive order-ahead canteen application to reduce student queues and improve break-time efficiency.
- Implemented registration and login flows, menu search and filtering, item customization, cart management, and simulated checkout.
- Built order-status tracking, review, and profile management workflows with persistent client-side state using localStorage

Image Classification with Transfer Learning

2026

Developer | Python, TensorFlow, Keras, MobileNetV2

- Developed a four-class image classifier using MobileNetV2 transfer learning with preprocessing and augmentation pipelines.
- Applied frozen feature extraction followed by fine-tuning and evaluated generalization using validation performance.

Stock Price Forecasting Using LSTM

2026

Developer | Python, TensorFlow, Keras, Pandas, NumPy

- Built an LSTM model for next-day closing-price forecasting using chronological data splits and leakage-safe scaling.
- Created sliding-window sequences and compared model configurations using RMSE, MAE, MAPE, and prediction visualizations.

ORGANIZATIONAL EXPERIENCE

Student Council

2018 - 2019

Chief of Sports Division

- Planned event rundowns and coordinated the execution of student sports activities.
- Communicated schedules, activity flows, and operational requirements with other divisions to ensure alignment.
- Made fair tournament brackets for multiple events

Methodist Cup - Sports, Education, and Arts Competition

2023

Security Division

- Planned entry, exit, and access routes for staff, participants, supporters, and spectators.
- Assisted with sponsor logistics and monitored event operations to help competitions run safely and smoothly.
- De-escalate disturbances, commotion, quarrels, and support crowd safety throughout the event.

EDUCATION

Bina Nusantara University- Jakarta, Indonesia

2024– 2028 (Expected)

Bachelor of Computer Science in Data Science | GPA: [3.86/4.00]

- Relevant coursework: Machine Learning, Deep Learning, Artificial Intelligence, Data Mining and Visualization, Bayesian Data Analysis, Linear Algebra, Calculus, Discrete Mathematics, Statistics, Data Structures, Database Technology, Model Deployment, Text Mining, Prescriptive Data Science, Software Engineer.

TECHNICAL SKILLS

Programming: Python, C#, SQL, R, C/C++

Data and Machine Learning: Pandas, NumPy, scikit-learn, TensorFlow, Keras, Apache Spark, Matplotlib, Seaborn`

Software and Deployment: ASP.NET MVC, .NET 8, Razor Pages, FastAPI, Streamlit, MLflow, AWS SageMaker

Database and Tools: SQL Server, Git, GitHub, Jupyter Notebook, VS Code, MySQL

CERTIFICATES

Data Classification and Summarization Using IBM Granite – IBM	2025
Efficient Large Language Model (LLM) Customization – NVIDIA	2025

LANGUAGES

Indonesian: Native | English: [Professional Working Proficiency / B2 / C1]
